(54) Title: SYSTEM AND METHOD FOR PROVIDING STERILE FLUIDS FOR ADMIXED SOLUTIONS IN AUTOMATED PERITONEAL DIALYSIS

(57) Abstract

A system and a method are provided for admixing solutions. The system includes containers separately accessible by one or more pumps for mixture of the solutions in a container immediately before administration to a peritoneal cavity of a patient. Alternatively, the system and method allow for direct administration of the mixed solution to the peritoneal cavity of a patient without intermediate mixing thereof. The solutions may be mixed in predetermined ratios as input to the system prior to delivery.
