Abstract

Holder for a drinks container

10 The invention relates to a holder (10) for a drinks container (12; 14). The invention proposes providing the holder (10) with a holding part (24) having an insertion opening (26), which holding part (24) is guided by a parallelogram guide means (28) at a base part (16) having a lateral support (22). As a result, a free width (d) can be matched to the diameter of the inserted drinks container (12; 14). (Figure 1)
