INFORMATION DELIVERY MANAGEMENT APPARATUS, MOBILE
COMMUNICATION EQUIPMENT, INFORMATION DELIVERY CHECK SYSTEMS,
AND INFORMATION DELIVERY CHECK METHODS

ABSTRACT

When information is delivered to a receiver mobile communication terminal B, an update unit 20 updates delivery status data stored in first storage 40, from "undelivered" to "delivered" in response to an update request from a relay 70 when check permission data stored in second storage 30 is "permitted". When in this state a sender terminal A issues a check request for the delivery status data, a sending unit 20 sends the delivery status data of "delivered" status to the sender terminal A. When the check permission data is set as "prohibited", the delivery status data is not updated to the delivered status even if the receiver has received the information.
