

METHOD AND APPARATUS FOR IDENTITY INFORMATION VERIFICATION

Abstract

The embodiment of the present invention provides a method and device for verifying identity information. The method includes: receiving image information transmitted and rendered by a client; extracting feature information from the image information; matching the feature information with the feature determination information collected in advance; the feature determination information having associated identity information; determining whether the client fits with the identity information when the match is successful. The embodiment of the present invention identifies a user on the basis of the uniqueness of the image information rendered by different client environments and clients, ensuring the accuracy of identification of user identity information, meanwhile avoiding the problem that the user identity information cannot be identified due to the shutdown of Cookie by clients, and raising the success rate of identification of identity information.
