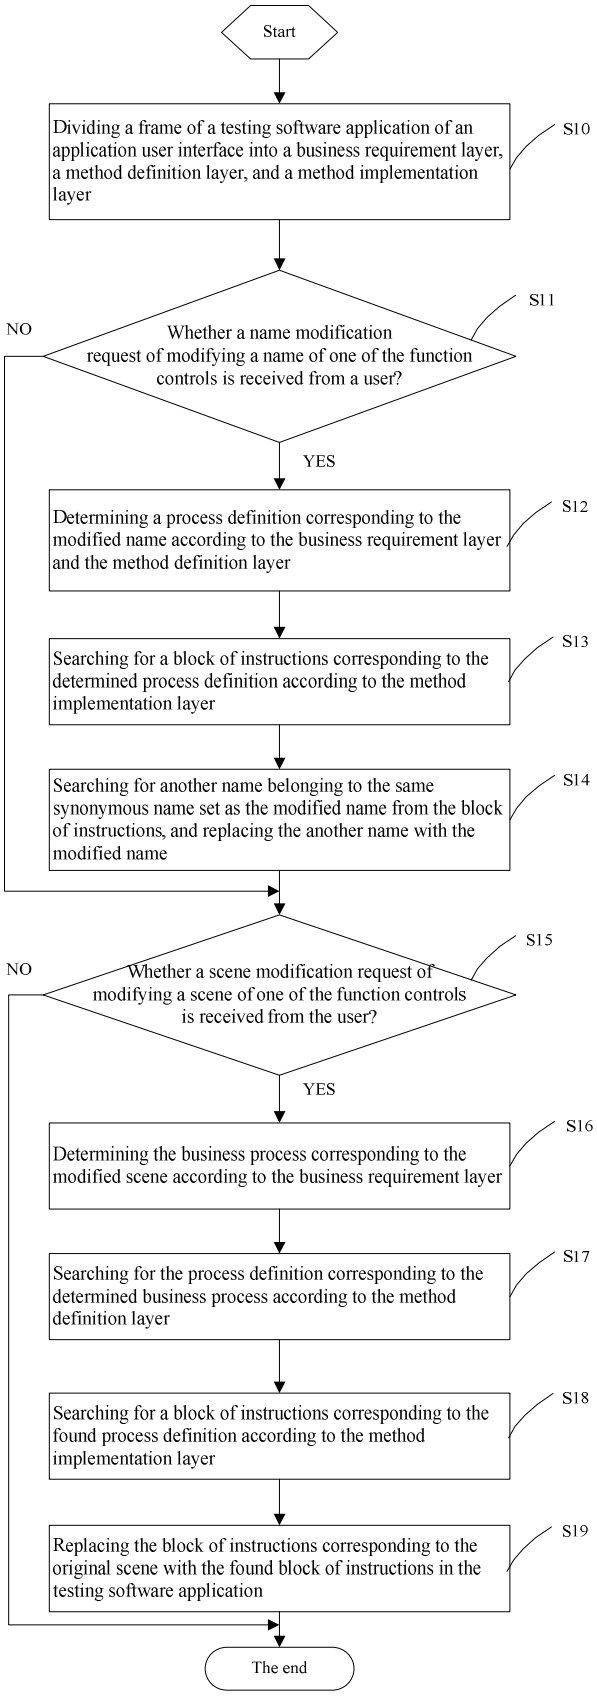
FIG. 3



Start
Dividing a frame of a testing software application of an application user interface into a business requirement layer, a method definition layer, and a method implementation layer
S10
Whether a name modification request of modifying a name of one of the function controls is received from a user?
S11
NO
YES
Determining a process definition corresponding to the modified name according to the business requirement layer and the method definition layer
S12
Searching for a block of instructions corresponding to the determined process definition according to the method implementation layer
S13
Searching for another name belonging to the same synonymous name set as the modified name from the block of instructions, and replacing the another name with the modified name
S14
Whether a scene modification request of modifying a scene of one of the function controls is received from the user?
S15
NO
YES
Determining the business process corresponding to the modified scene according to the business requirement layer
S16
Searching for the process definition corresponding to the determined business process according to the method definition layer
S17
Searching for a block of instructions corresponding to the found process definition according to the method implementation layer
S18
Replacing the block of instructions corresponding to the original scene with the found block of instructions in the testing software application
S19
The end
