(54) Title: METHODS OF PURIFYING ADENO-ASSOCIATED VIRUS (AAV) AND/OR RECOMBINANT ADENO-ASSOCIATED VIRUS (RAAV)

FIG. 1

(57) Abstract: A method of purifying a viral vector is provided. The method includes loading a nonionic density gradient into a continuous flow centrifuge rotor; loading a material including the viral vector into the continuous flow centrifuge rotor; rotating the continuous flow centrifuge rotor in a manner sufficient to separate the viral vector and a predictable contaminate from the material in the nonionic density gradient; and unloading the separated viral vector and the predictable contaminant from the continuous flow centrifuge rotor.
