(54) Title: IDENTITY VERIFICATION METHOD AND APPARATUS

(54) 发明名称: 一种核身方法和装置

图 1

- S101 Receive an identity verification request from a device to be verified, wherein the identity verification request comprises device environment information of the device to be verified, and is used for requesting identity verification of a user corresponding to the device to be verified
- S103 According to historical feature information and the device environment information, determine whether the device to be verified is credible, wherein the historical feature information comprises device environment information of a historical device
- S105 According to a determination result of whether the device to be verified is credible, determine an identity verification policy for carrying out identity verification on the user, so as to carry out identity verification according to the identity verification policy

(57) Abstract: Disclosed is an identity verification method, comprising: receiving an identity verification request from a device to be verified, wherein the identity verification request comprises device environment information of the device to be verified, and is used for requesting identity verification of a user corresponding to the device to be verified; according to historical feature information and the device environment information, determining the credibility of the device to be verified, wherein the historical feature information comprises device environment information of a historical device; and according to the credibility of the device to be verified, determining an identity verification policy for carrying out identity verification on the user, so as to carry out identity verification according to the identity verification policy. By using the method in the embodiments of the present application, without the perception of a user, an identity verification policy applicable to a currently held device can be selected for the user according to the credibility of the device held by the user. Therefore, the embodiments of the present application facilitate improvements in the security and reliability of identity verification, and can satisfy usage requirements of the user, and improve the user experience.

(57) 摘要: 本申请公开了一种核身方法, 包括: 接收来自待验证设备的核身请求, 所述核身请求中包括所述待验证设备的设备环境信息, 用于请求对待验证设备所对应的用户进行核身; 根据历史特征信息以及所述设备环境信息, 确定所述待验证设备的可信程度, 所述历史特征信息包括历史设备的设备环境信息; 根据所述待验证设备的可信程度, 确定对用户进行核身的核身策略, 以便按照所述核身策略进行核身。采用本申请实施例的方法, 可以在用户无感知的情况下, 根据用户所持设备的可信程度, 为用户选择适用于当前所持设备的核身策略。因此, 本申请实施例有利于提高核身的安全性和可靠性, 并能够满足用户的使用需求, 提升用户体验。
