(54) Title: METHOD OF ASSEMBLING A MEDICAL DEVICE

FIG. 1

(57) Abstract: The present disclosure generally provides for a method of assembling a medical device, comprising forming a first assembly comprising a main body, a needle mechanism, a sterile connector operatively connected with a portion of the needle mechanism and configured to receive a cartridge. The needle mechanism and the sterile connector form a fluid path assembly which attaches with the main body forming the first assembly. The method further includes forming a second assembly comprising a base end and a translation mechanism, the translation mechanism is configured to engage the cartridge, and combining the first assembly and the second assembly.
