

ABSTRACT

COMMUNICATION METHOD AND COMMUNICATIONS APPARATUS

This application provides a communication method and a communications apparatus. The
5 method includes: receiving, by a first terminal device, first information sent by a network device,
where the first information includes an indication information of a first unicast connection and a
reference signal configuration corresponding to the first unicast connection, the reference signal
configuration is used by the first terminal device to send a reference signal to a second terminal
device, and the first unicast connection is a unicast connection established by the first terminal
10 device and the second terminal device on a sidelink; and sending, by the first terminal device, the
reference signal to the second terminal device on the sidelink based on the reference signal
configuration. According to the communication method in embodiments of this application,
measurement reporting of the unicast connection in V2X can be implemented.
