

COMMUNICATION METHOD, APPARATUS, AND SYSTEM

ABSTRACT

This application provides a communication method, apparatus, and system, so that each antenna panel can perform independent power control, making power control more accurate, and
5 improving information transmission efficiency. The method includes: A terminal device obtains a first parameter corresponding to each of a plurality of antenna panels; determines, based on the first parameter corresponding to each of the plurality of antenna panels, a power control parameter set corresponding to each of the plurality of antenna panels; determines, based on the power control parameter set corresponding to each antenna panel, power for transmitting information on each
10 antenna panel; and transmits information on each antenna panel based on the power for transmitting information on each antenna panel.
