A B S T R A C T

A pull-on disposable wearing article (1A) is formed in a crotch region with a pair of first folding guide lines (19) extending from a first waist lateral margin (11) toward a transverse middle (7a) of the crotch region (7) and a pair of second folding guide lines (20) extending from a second waist lateral margin (12) toward the transverse middle (7a) of the crotch region (7). The crotch region (7) is divided into a first zone (21) enclosed by the first waist lateral margin (11) and the first folding guide lines (19), a second zone (22) enclosed by the second waist lateral margin (12) and the second folding guide lines (20) and a third zone (23) except these first and second zones (21, 22). Inside the side edges (4b) of the core (4), first and second elastic members (24, 25) stretched at a predetermined ratio are contractibly attached to the article. These first and second elastic members (24, 25) extend in the leg-surrounding direction across these zones (21, 22) to the third zone (23). These zones (21, 22) are pulled inward as viewed in a leg-surrounding direction under a contractile force of the elastic members (24, 25) to form tucks (26, 27) which are convex inwardly of the leg-holes (15).
