

ABSTRACT

LENS INCORPORATING MYOPIA CONTROL OPTICS AND MUSCARINIC AGENTS

Ophthalmic devices, such as contact lenses, may incorporate myopia
5 control optics in combination with therapeutic agents also known to control
myopia to create a drug delivery mechanism to inhibit or arrest the progression of
myopia in individuals. Any number of contact lenses incorporating myopia
control optics may be combined with a therapeutic agent such as atropine,
atropine sulphate monohydrate, and/or pirenzepine.
