

[Document Name] Abstract

Koji fermented composition, and seasoning, antioxidant, food product or beverage comprising the same

[Abstract] There are provided: a koji fermented composition, which is produced using black koji mold, and in which the amount of citric acid generated is reduced, without losing acid protease activity or xylanase activity produced by the black koji mold; and a method for producing the koji fermented composition. The koji fermented composition is obtained by inoculating black koji mold into tea leaves, and culturing the tea leaves.
