

ABSTRACT

A booth (1) includes a booth main body (10) including a facing panel (11), a right-side panel (12), and a left-side panel (13), a top plate (20A), and an inclined panel (14)
5 that extends from a booth left front-end portion (10a) of the right-side panel (13) of the booth main body (10) while being inclined to become farther from the facing panel (11) toward the right-side panel (12) in the plan view and forms an entrance (100e) into the booth main body (10) between the inclined panel (14) and a booth right front-end portion (10b) of the right-side panel (12) of the booth main body (10). The top plate (20A)
10 includes a panel side edge portion (21) that extends along at least the facing panel (11) and the right-side panel (12), and a front edge portion (22A) that includes a first edge portion (22a) that becomes closer to the facing panel (11) from a first end (22e) on the right-side panel (12) side of the front edge portion toward the left-side panel (13).
