

Abstract

There is demand for a novel method for manufacturing a RebD crystallized product. The present invention provides a method for manufacturing a RebD-containing crystallized product, characterized in including: a step for mixing a stevia plant-derived crude product having a total steviol glycoside content of 50-95 mass%, and containing at least RebA and RebD, in a solvent containing ethanol and having a methanol concentration of 1 mg/L or less, and adjusting a crystallization solution; and a step for cooling the crystallization solution under stirring and causing RebD to precipitate.
