WHAT IS CLAIMED IS:

1. A wig base, wherein:

a combined mesh pattern is formed by overlapping a first net member (21) having a first mesh pattern with a polygonal shape, and a second net member (22) having a second mesh pattern with a polygonal shape,

the combined mesh pattern is formed by meshes located inside an outer edge of the first net member (21) and meshes located inside an outer edge of the second net member (22),

the combined mesh pattern includes meshes whose mesh sizes are relatively different, and

the combined mesh pattern is formed in an entire portion of the wig base.

2. The wig base according to claim 1, wherein:

a filament (21a) which forms the first net member (21) and a filament (22a) which forms the second net member (22) are connected and fixed at least at one of the mutual intersecting points.

3. A wig formed by planting false hairs to the wig base according to claim 1 or 2.
