

ABSTRACT

**Satellite communication device, satellite communication system
5 comprising such a device and method for managing the resources
allocated within such a system**

10 The invention concerns the field of satellite communication systems and relates to a method for managing communication resources allocated by central control equipment to the various terminal communication devices within a global satellite communication system.

In particular, the invention concerns the management of communication resources by way of the monitoring of the equivalent isotropically radiated power transmitted by a terminal of the satellite communication system.
