

COOLING STORAGE

ABSTRACT

It is an object to provide a cooling storage device (1) which can prevent condensation from forming on the cooling storage device (1) glazing doors. The cooling storage device (1) is constructed in such a manner that an opening of a heat insulating housing (6) is openably closed by slidable doors (21,22) and each of the doors (21,22) is constructed of a heat insulating wall (27) whose peripheral portion is thinner and a door sash (29,31) into which the peripheral portion of the heat insulating wall (27) is fitted.
