DISPLAY A COMPLEX TREE STRUCTURE AMONG MULTI WINDOWS

ABSTRACT

Multiple windows are used to represent different branches of a single tree structure (2100). The user can select any tree node and choose "start new window" action (810). A visual link (370) is attached for the parent node (340) to the virtual root node (360) of the new subtree window (315). Within each window, information is displayed in a more manageable manner. The subtrees can be merged back into the parent tree (820).
