(54) Title: PERIVASCULAR ANTI-INFLAMMATORY THERAPY FOR VENOUS THROMBOSIS

(57) Abstract: Disclosed herein are methods, devices, systems, and kits for reducing inflammation and rate of progression to post-thrombotic syndrome (PTS) in individuals who have experienced venous thrombosis. Provided herein are approaches for local delivery of therapeutic agents to reduce inflammation and resolve clotting in affected veins in limbs. A catheter is positioned within the affected vein, and a composition comprising one or more therapeutic agents is injected into the perivenous tissue through the wall of the vein. The puncturing to inject may be achieved by an expanding balloon on the distal end of the catheter.
