

ABSTRACT

Embodiments of the present invention relate to the technical field of communications. Disclosed are a resource configuration method and system, a terminal device, and a network device. The method comprises: sending to the network device a message carrying a terminal type of the terminal device; and receiving resource configuration information of the terminal device sent by the network device, the resource configuration information being obtained by the network device according to the terminal type. The terminal device can actively report the terminal type to the network device, so that the network device can perform reasonable resource allocation for the terminal device according to the terminal type, thereby reducing network resource waste and improving the reasonability of terminal services.
