Title of Invention: Method and System for Classifying a Road based on an Image

Abstract

The present disclosure provides methods and systems for classifying a road based on an image. In some examples, there is provided a method comprising: identifying, by a processor, a feature associated with a road based on an appearance of the road in an image; and generating, by the processor, a classification result indicative of whether the road is accessible by a 2-wheeled vehicle based on the feature.
