

PICTURE DECODING METHOD AND APPARATUS, PICTURE ENCODING METHOD AND APPARATUS, AND DEVICE

ABSTRACT

The present disclosure provides a picture decoding method and apparatus, a picture encoding method and apparatus, and a device. The picture decoding method comprises: when permission protection is enabled, determining one or more target region categories corresponding to a target permission level (301); and decoding a current coding unit according to the one or more target region categories (302). With the technical solutions of the present disclosure, the permission protection of various types of information (e.g., a license plate, a local region of a human body, a screen, text, etc.) in a picture can be performed, thereby improving data security.
