(54) **Title: METHODS AND APPARATUS TO MONITOR AND MANAGE LOADING DOCKS AND FACILITY OPERATIONS**

(57) **Abstract:** Methods, apparatus, systems, and articles of manufacture to monitor and manage loading docks and facility operations are disclosed. An example apparatus includes processor circuitry to: identify a first occurrence of a safety event based on outputs of sensors associated with at least one of doors or docks, the event associated with a first event type of a plurality of event types; determine a time of day different instances of the event occurred within a given period of time; determine a number of at least one of different doors or different docks associated with the different instances of the event; select a particular corrective action based on the time of day of the different instances of the event and based on the number of the at least one of the different doors or the different docks; and cause an output device to output an indication of the particular corrective action.
