(54) Title: UPENDING DEVICE

(57) Abstract: Upending device (1) for upending tubular piles (FP, CP), the upending device comprising: a base element (20) for insertion into an end of, and for extending along an inside of, the tubular pile; a plurality of connection elements connected to the base element and configured to engage with one or more inside surfaces of the tubular pile; and a lifting arm (30) for coupling the upending device to a hoisting element (H); wherein the lifting arm is rotatably coupled to the base element, the lifting arm being rotatable relative to the base element about a first axis (A1), wherein the first axis is a central axis of the base element and is substantially parallel to a central axis of the tubular pile, in use. The invention further relates to a method of upending a tubular pile, using the device.
