

TREATMENT METHOD FOR USED SANITARY GOODS

ABSTRACT

This treatment method for used sanitary goods uses a treatment device that comprises: a
5 rotary drum 4 which stores the used sanitary goods; a water tank 3 which houses the rotary drum
therein; a water feeding pipe 10 through which water is fed into the water tank 3; and a passage
12 for discharging water from the water tank 3. The method involves: inputting, into the rotary
drum 4, used sanitary goods and an individually packaged chemical having a chemical
accommodated in a container; and rotating the rotary drum 4 to cause the container to break to let
10 the chemical diffuse within the rotary drum.
