(54) Title: DATA EXTRACTION SYSTEM AND METHOD

FIG. 3

(57) Abstract: The present invention is concerned with a data extraction system and method for extracting data from a document. The data extraction system comprises a data extraction application, the data extraction application including a trained document classification model and computer program code which when executed by a processor of an electronic device, causes the processor to: present a user interface on the electronic device instructing a user to capture an image of a document; submit the captured image of the document to the document classification model; receive from the document classification model a document category value for the document; process the document category value to select a next data extraction operation to be performed by the data extraction application; and launch the selected data extraction operation.
