

CASE AND HEATING COOKER

ABSTRACT

An engaging portion (70) of a second member (6) has an engaging

5 pawl (71) that protrudes outward from an engagement hole (51) and
engages with an engaged portion (50) of a first member (4), the engaged
portion (50) of the first member has an abutting engagement strip
portion (53) that extends along an insertion direction of the engaging
portion (70) from an abutment surface (52) at a periphery of the
10 engagement hole (51), and the abutting engagement strip portion (53) has
a through groove (55) that extends along the insertion direction of the
engaging portion (70) from the abutment surface (52) and penetrates
through an outer side surface (530) of the abutting engagement strip
portion (53).
