

ABSTRACT

A method and apparatus for displaying historical messages in a virtual battle, a device, and a storage medium, relating to the technical field of human-computer interaction. The method comprises: displaying a historical message dialog box, wherein the historical message dialog box is used for displaying historical interaction messages, and a first display attribute of each historical interaction message is related to a message sending moment; displaying a first interaction message and message prompt information in the historical message dialog box, wherein the first interaction message is a historical interaction message received within a first duration, the message prompt information is used for prompting the presence of a second interaction message, and the second interaction message is a historical interaction message received outside the first duration; and when an operation for viewing the messages in the historical message dialog box meets message display conditions, displaying the second interaction message in the historical message dialog box. The method enriches the message display forms of historical interaction messages, and improves the efficiency of viewing historical interaction messages.
