

## ABSTRACT

The traveling vehicle system (1) includes a track (4) having a portion that is a non-self-propelling section where the traveling vehicle 6 is unable to be self-propellable, a traveling vehicle (6) configured to travel along the track (4), and a moving unit (60) configured to move the traveling vehicle (6) in one direction in the non-self-propelling section. The moving unit (60) includes a moving mechanism (63) configured to move the movable block (61) in the one direction. The traveling vehicle (6) includes an engagement part (53) capable of being engaged with the movable block (61), and a switching mechanism (53C) configured to switch the position of the engagement part (53) between a first position at which the engagement part (53) is engaged with the movable block (61) and a second position at which the engagement part (53) is separated from the movable block (61). The moving mechanism (63) moves the traveling vehicle (6) by moving the movable block (61) in the one direction with the engagement part (53) engaged.
