

TITLE OF INVENTION: AN AUTOMATIC FRIED BUN EQUIPMENT

ABSTRACT

An automatic fried buns equipment and fried buns making method thereof, by setting each module in the control circuit, the heating power and heating time of the fry pan can be automatically controlled, and the rotating device can drive the fry pan to rotate so that the entire fry pan can be heated uniformly. Even if the user is not familiar, he can use this equipment to automatically complete fried buns. And it is easily improve the production efficiency of fried buns, and realize standardized and batch automated production. Moreover, this equipment can also adjust the control circuit according to the needs of other different products, and can also automatically complete the production of various fried foods, such as fried dumplings, pot stickers, pancakes and so on.
