(54) Title: METHOD AND SYSTEM FOR FACILITATING TRUSTLESS PAYMENT TRANSACTIONS USING SMART CONTRACTS

FIG. 1

(57) Abstract: A method for processing a trustless blockchain transfer via a card payment network includes: storing, in a blockchain associated with a blockchain network, a smart contract configured to control an amount of blockchain currency in the blockchain; receiving, by a blockchain node in the blockchain network, an authorization request message from a first computing system, where the blockchain nodes submits the authorization request message as input to the smart contract; receiving, by a blockchain node, an authorization response message from a second computing system, where the blockchain nodes submits the authorization response message as input to the smart contract; and executing, by a blockchain node, the smart contract in the blockchain causing the smart contract to (i) verify the authorization request message and authorization response message, and (ii) transfer at least a portion of the amount of blockchain currency to a predetermined blockchain address.
