

GROUP FEATURE MINING METHOD AND DEVICE, EVENT IDENTIFICATION METHOD AND DEVICE, AND STORAGE MEDIUM

ABSTRACT

5 This specification provides a group feature mining method and device, an event identification method and device, and a storage medium. In the group feature mining method, a plurality of attribute value combinations can be determined based on obtained event information of a normal event and obtained event information of an abnormal event; an occurrence frequency of any attribute value combination in the plurality of attribute value combinations in the abnormal event
10 reaches a preset threshold, but the any attribute value combination does not occur in the normal event; and a group feature of a target group is generated based on the plurality of attribute value combinations. Subsequently, in the event identification method, whether the target event is an event executed by the target group can be identified based on the generated group feature.
