

FOLDABLE ELECTRONIC DEVICE

【ABSTRACT】

According to an exemplary embodiment of the present disclosure, a foldable electronic device may include a foldable housing, a flexible display module, and a flexible film. The foldable housing may include a first housing, a second housing, and a hinge portion for connecting the first housing and the second housing. The flexible display module may include a third display area located to correspond to the hinge portion, a first display area extending from the third display area and disposed on the first housing, and a second display area extending from the third display area and disposed on the second housing. The flexible film may be disposed on a foldable housing between the foldable housing and the flexible display module. The hinge portion may include a center plate including a recess provided on one surface facing the third display area. A part or all of the flexible film may be supported by the center plate between the third display area and the center plate to be disposed flat and may overlap the recess.
