(54) Title: A SIGNAL PROCESSING SYSTEM

Fig. 10

(57) Abstract: Disclosed is a signal processing system comprising a plurality of processing modules, the plurality of processing modules being configured to receive signal data characterising information of a common source, and configured to apply processing to the signal data, and provide a processed result as an output, wherein processing applied to the signal data includes temporal processing. The plurality of processing modules in use process separate portions of signal data to improve signal to noise ratio thereof.
