

Instance subgraph

Reasoning rule

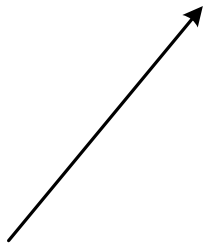

{A merchant} [purchases] {a product} (for a plurality of times), and {the product} [belongs to] {a category} → {The merchant} [prefers] {the category}

Confidence=0.85

Question and answer template

Q: Does {the merchant} [prefers] {the category} ?
 A: {The merchant} [purchases] {the product} for a plurality of times, and {the product} [belongs to] {the category}, and therefore {the merchant} {probability descriptor} [prefers] {the category}

Prompt

Q: Does the convenience store xx prefers the beverage?
 A: The convenience store xx purchases cola and orange juice for a plurality of times, and the cola and the orange juice are beverages, and therefore it is very likely that the convenience store xx prefers the beverage
