(54) Title: SYSTEMS AND METHODS FOR FRAMING MEETING ENVIRONMENTS AND PARTICIPANTS

FIG. 1

(57) Abstract: Consistent with disclosed embodiments, systems and methods for analyzing video output streams and generating a primary video stream may be provided. Embodiments may include automatically analyzing a first video output stream and a second video output stream, based on at least one identity indicator, to determine whether a first representation of a meeting participant and a second representation of a meeting participant correspond to a common meeting participant. Disclosed embodiments may involve evaluating the first representation and the second representation of the common meeting participant relative to one or more predetermined criteria. Embodiments may involve selecting, based on the evaluation, either the first video output stream or the second video output stream as a source of a framed representation of the common meeting participant to be output as a primary video stream. Furthermore, embodiments may include generating the primary video stream including the framed representation of the common meeting participant.
