Text Processing Method, Electronic Device, and Storage Medium

ABSTRACT

This application discloses a text processing method, an electronic device, and a storage medium, relating to the fields of large model technology and data processing. The method includes: obtaining text to be processed, wherein the text content of the text to be processed is described in a first language, and the first language is a regional language; using a first language model to perform text understanding and generation on the text to be processed to obtain a text processing result, wherein the first language model is a large language model obtained by performing language enhancement on the first language based on a second language model, and the second language model is a large language model applicable to a second language, and the second language is a universal language. This application addresses the technical problem of poor text understanding and generation effects for minor languages in related technologies.
