(54) Title: DATA FORWARDING FOR DUAL CONNECTIVITY

Fig. 3

(57) Abstract: The present subject matter relates to a method comprising: sending by an apparatus to a user equipment a message, herein referred to as reconfiguration message, for a conditional handover, the reconfiguration message indicating a set of one or more candidate target master nodes and associated candidate target secondary nodes; in response to the sending of the reconfiguration message, receiving by the apparatus from the user equipment a message indicating at least one specific candidate target secondary node of the candidate target secondary nodes; performing by the apparatus data forwarding to the at least one specific candidate target secondary node and to a subset of the candidate target master nodes that are associated with the at least one the specific candidate target secondary node.
